goes beyond the relationships between the variables of motion as illuminated in kinematics to the cause of motion, which is force. Newton's laws of motion Newton's first law of motion, also called the law on inertia, states that an object continues in its state of rest or of uniform motion unless compelled to change that state by an external force.

Dynamics depends entirely on the Professor. You can get the guys who are simply cognitively unable to break down the subject matter to entry level (which is what you are, on your first exposure to dynamics), and treat an auditorium full of Sophomores as if they were Grad students.
