This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality $x = 0$. In analysis, we prove two inequalities: $x > 0$ and $x < 0$. To prove the inequality $x > 0$, we prove $x > \epsilon$ for all positive ϵ . To prove the inequality $x < 0$, we prove $x < -\epsilon$ for all positive ϵ . The term real analysis

Let x be a real number. If $0 \leq x < \varepsilon$ is true for all real numbers $\varepsilon > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. If we wish to show that $x=0$, we will show that $0 \leq x < \varepsilon$ for all positive ε . The term “real analysis” is a little bit of a misnomer. I prefer to normally use just “analysis.”
