Mixtures and Solutions Reading Comprehension by ...

Solutions A solution is a mixture of one substance dissolved in another so the properties are the same throughout. A solution is composed of a solute and the solvent. The solute is the substance being dissolved and the solvent is the part of the solution that does the dissolving. The solute is of molecular size.

Mixtures Reading - Cornell Center for Materials Research

The three main kinds of combinations are mixtures, solutions, and compounds. 2 Soil is a mixture. A shovelful of soil might contain some top soil, some clay, maybe a little sand, a few bugs, maybe some really tiny microorganisms, maybe a worm, maybe some rotting plant roots, and maybe some more things. Soil is a mixture.

Mixtures And Solutions Worksheets - Learny Kids

Everything in a solution is evenly spread out and thoroughly mixed. Heterogeneous mixtures have a little more of one thing (higher concentration) in one part of the system when compared to another. Let's compare sugar in water (H 2 O) to sand in water. Sugar dissolves and is spread throughout the glass of water. The sand sinks to the bottom. The sugar-water is a homogenous mixture while the sand-water is a heterogeneous mixture.

Like a mixture, solutions can be separated into its original components. However, unlike mixtures, solutions can be separated by evaporation. For example: the water and salt solution will evaporate as the solution is heated. The water will change from liquid to gas as the water-salt solution begins to boil, leaving only the salt behind.

Mixtures are everywhere. The definition of a mixture is a combination of different things that are not chemically bonded. For example, when we bake a cake, it's a result of a mixture of eggs, flour, sugar, and other ingredients. Mixtures can also be much simpler than that. Any time two or more items are combined, a mixture is formed.
