Shortwave listening (commonly abbreviated to SWL) is the fascinating hobby of listening in to broadcasters around the world. This can be done at minimal cost from anywhere in the world without having to reply on anyone else. All that is required is a suitable Shortwave (SW) radio receiver and an antenna. Often the antenna is part of the receiver.

Shortwave radio displays usually come in two types: digital and analog. I always recommend that newcomers purchase a radio with a digital display (and, preferably, with a keypad for direct frequency entry) if they don't already have a radio. That's the reason why you won't find an analog display on my recommended radios page.

The Retekeess V115 Portable Shortwave radio is without a doubt one of the best deals on the market currently. Not only is it well-padded with features but it also comes at a bargain price compared to its competitors. The V115 covers the shortwave band from 8 to 18 MHz which leaves some of the lower frequencies untapped.

### **Shortwave Frequencies | KV5R.COM**

Shortwave radio is an audio network that operates on frequencies in between the FM and AM bands. Its primary advantage is that data can be transferred throughout long distances and can reach the masses through one transmitter. Messages and sound are transmitted through electromagnetic waves that range from 10 to 80 meters long (33-262 feet).
